Concealed hollow-chamber aluminium profile suitable for masonry

Delivery and installation of the concealed aluminium profile for flush skirting boards, including corner connections for internal and external angles as well as connecting straps for a proper conjunction of the single profiles without getting any visible edges.

The pre-drilled profiles covered with a protection foil are fixed vertically and horizontally to the masonry or substructure using an appropriate mounting foam, the profiles must be well screwed to the wall. The height will be defined by the construction management.

Depth of the plaster: 15 mm

Visible depth of the skirting board: 9,5 mm

Suitable for wooden and cermaic baseboards
