Concealed door frames

# TCS50F for inward opening doors

#### Description

The aluminium profiles TCS50F are used to create **FRAMELESS** doors for solid and dry constructions. They are made on specific **costumer demands** and guarantee perfect finished edges, excact lines and filigree shadow gaps. With the clear lines and the smooth junction between the door leave and the wall they refine the <u>visual effects</u> of the room and accomplish all demands of <u>modern architecture</u>. Thanks to the special structure and the snap-in mesh they offer a permanent connection between door elements and the wall. They eliminate plaster cracks and avoid an inconvenient acrylic gap. The offered functionality with the fast and professional assembly through snapIn corner connectors and wall fixing brackets outstrips the concept of design.

#### Material

The door profiles are made of raw untreated aluminium alloy EN EW-6060 (Al-MgSi) with possible toleration according to UNI EN 755-9. The above alloy offers good strength values, is corrosion resistant and is particularly suitable as a construction materil for high surface requirements.

Cement and its derivatives produce, in wet conditions, alkaline substances which can lead to corrosion if left to work on the surface of the aluminium alloy. It is therefore recommended that the profiles are always kept free of cement, adhesive and joint material.

Corrosion is prevented by the recommended on-site priming and painting of the profile in wall paint.

Aluminium is not resistant against all chemical compounds, therefore contact with hydrogen chloride (HCI) and phosphoric acid (H3PO4) should be avoided. Products of cleaning stones, ceramics, etc. can also damage the surface. Moisture or salt water can discolour the surface of the profile.

### Assembly

The assembly must be done in the bare brickwork. Thanks to the provided accessories the profiles can be assembled easily, joined precisely and set into the wall opening. The corner connectors ensure a perfect technical link of 90 degree between the upright profiles and the upper part. To guarantee a perfect distance the AGS bottom spreader bar should be inserted. After plastering works the door panels must be installed. The manual guide must be read carefully before beginning with the assembly of the frame. For a professional installation only the recommended materials from AGS-systems must be used, otherwise every liability expires.

Here you can find the assembling video:

drywall

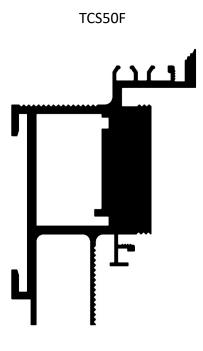

#### Door leaves

Depending on the door leaf a door frame with 50 mm can be used.

## Profiles

The TCS50F profiles are supplied mitre-cut to suit door size and milled to suit hidden hinges and striking panels or other hardware. All profiles are covered by a protective film and packed/delivered in a kit including the mounting- and fixing accessoires.
