Concealed black anodized aluminum shadow-gap profile suitable for drywall and masonry

Delivery and installation of the concealed black anodized aluminum profile for shadow-gap with protection foil, including connecting straps for a proper conjunction of the single profiles.

The profiles are fixed vertically and horizontally to the substructure or on the first layer. The second layer will be put on the aluminum profile and well bolted with self cutting screws. For masonry the profiles are fixed to the substructure using an appropriate mounting foam and screwed to the wall.

The height will be defined by the construction management.

For plaster board: 12,5mm
and/or standard plaster depth: 15mm

Concealed aluminum shadow-gap profile:

AGS-systems srl, S20 profile
